## **DETAILED ACTION**

### ***Response to Amendment***

1. The amendments to the claims filed on June 14, 2010 have been fully considered. The 35 USC 112 1<sup>st</sup> paragraph rejection is maintained for claim 41.
2. A new ground of rejection is set forth herein.

### ***Claim Rejections - 35 USC § 112***

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

3. Claims 1, 23, 26, 29, 30, 32, 40, 42-60 and 70 rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for preparing compounds of Formula I or pharmaceutically usable salts thereof, does not reasonably provide enablement for preparation of stereoisomers.

In *In re Wands*, 8 USPQ2d 1400 (1988), factors to be considered in determining whether a disclosure meets the enablement requirement of 35 U.S.C. § 112, first paragraph, have been described. They are:

1. The nature of the invention,
2. The state of the prior art,
3. The predictability or lack thereof in the art,
4. The amount of direction or guidance present,
5. The presence or absence of working examples,
6. The breadth of the claims,
7. The quantity of experimentation needed, and
8. The level of the skill in the art.

***The nature of the invention***

The nature of the invention is compounds of Formula I and stereoisomers thereof.

***The state of the prior art and the predictability or lack thereof in the art***

The state of the prior art is that a stereoisomer includes within the broadest reasonable interpretation any isomer. Constitutional isomers are compounds having the same composition whose atoms are connected differently. Constitutional isomers can contain different functional groups in varying positions.

***The amount of direction or guidance present and the presence or absence of working examples***

The only direction or guidance present in the instant specification is for the compounds of Formula I.

There is no data present in the instant specification for the preparation of any type of isomer, such as constitutional isomers.

***The breadth of the claims***

The instant breadth of the rejected claims is broader than the disclosure, specifically, the instant claims include any isomer, i.e. any compound with the same number of each atom.

***The quantity or experimentation needed and the level of skill in the art***

While the level of the skill in the pharmaceutical arts is high, it would require undue experimentation of one of ordinary skill in the art to prepare any isomer as instantly claimed since an isomer of the compounds need only have the same composition of atoms, not necessarily the same order of atoms and can have varying functional groups in varying positions. Therefore, the claims lack enablement for isomers.

This rejection can be overcome by deleting all instances of "stereoisomer".
